202201476	Parv Patel
202201483	Neel Tandel
202201501	Jish Chanchapra
202201524	Yash Rathod
202201525	Heer Shah
202201527	Zenil Rupareliya

Requirements not completed/implemented in the project

During the development of our website, several planned features were not implemented due to time constraints. One of these was the ability for instructors to collaborate with each other to develop courses jointly. Similarly, live lectures, which would have allowed instructors to engage with students in real-time, were not implemented.

For students, features like offline access to course materials and viewing progress history were not made available. Moreover, a planned discussion forum, where students and instructors could talk to solve doubts and discuss course topics, was not included.

On the administrative side, process payments and handle refunds is not developed. Similarly, with the case of the ability for admins to approve or reject course submissions to ensure quality content was not implemented.

Automated notifications to keep users updated about their courses and enrolment were not implemented. Similarly, the automated generation and distribution of completion certificates. A feature to assign badges based on user achievements and performance was also left out, although we have created a section for badges.

These features were not implemented for now, but they remain important for future updates and are part of our roadmap for enhancing the platform. The major reason for not completing these functionalities was because of time constraint. W
